How to delete programs off a ti-84 plus calculator

ARCHIVED You have attempted to use, edit, or delete an archived variable. For example, the expression $\dim(L1)$ produces an error if $L1$ is archived. **ARCHIVE FULL** You have attempted to archive a variable and there is not enough space in archive to receive it. **ARGUMENT** A function or instruction does not have the correct number of arguments. The arguments are shown in italics. The arguments in brackets are optional and you need not type them. You must also be sure to separate multiple arguments with a comma (.). For example, $\text{stdDev}(\text{list}, \text{freqlist})$ might be entered as $\text{stdDev}(L1)$ or $\text{stdDev}(L1, L2)$ since the frequency list or freqlist is optional. **BAD ADDRESS** You have attempted to send or receive an application and an error (e.g. electrical interference) has occurred in the transmission. **BAD GUESS** In a CALC operation, you specified a Guess that is not between Left Bound and Right Bound. For the solve(function or the equation solver, you specified a guess that is not between lower and upper. Your guess and several points around it are undefined. Examine a graph of the function. If the equation has a solution, change the bounds and/or the initial guess. **BOUND** In a CALC operation or with Select(, you defined Left Bound > Right Bound. In fMin(, fMax(, solve(, or the equation solver, you entered lower , upper. **BREAK** You pressed the E key to break execution of a programme, to halt a DRAW instruction, or to stop evaluation of an expression. **DATA TYPE** You entered a value or variable that is the wrong data type. For a function (including implied multiplication) or an instruction, you entered an argument that is an invalid data type, such as a complex number where a real number is required. In an editor, you entered a type that is not allowed, such as a matrix entered as an element in the stat list editor. You attempted to store an incorrect data type, such as a matrix, to a list. You attempted to enter complex numbers into the n/d MathPrint™ template. **DIMENSION MISMATCH** Your calculator displays the ERR: DIMENSION MISMATCH error if you are trying to perform an operation that references one or more lists or matrices whose dimensions do not match. For example, multiplying $L1 * L2$, where $L1 = \{1, 2, 3, 4, 5\}$ and $L2 = \{1, 2\}$ produces an ERR: DIMENSION MISMATCH error because the number of elements in $L1$ and $L2$ do not match. You may need to turn Plots Off to continue. **DIVIDE BY 0** You attempted to divide by zero. This error is not returned during graphing. The TI-84 Plus CE allows for undefined values on a graph. • You attempted a linear regression with a vertical line. **DOMAIN** You specified an argument to a function or instruction outside the valid range. The TI-84 Plus CE allows for undefined values on a graph. You attempted a logarithmic or power regression with a LX or an exponential or power regression with a LY. You attempted to compute GPrn(or GInt(with $\text{pmt} = 0$, or when neither CFList nor CFO is 0 (or vice versa). You attempted to define Tstep=0. You defined Tmax Tmin and Tstep > 0 (or vice versa). Window variables are too small or too large to graph correctly. You may have attempted to zoom to a point that exceeds the TI-84 Plus CE's numerical range. **ZOOM** A point or a line, instead of a box, is defined in ZBox. A ZOOM operation returned a maths error.
